

OFFICIAL BUILD RECORD

WEAI Version Archive

Verified development history from the preserved V27 records through V28.5 FINAL STABLE R38.

CURRENT RELEASE	LOCKED BASELINE
V28.5 FINAL STABLE R38 Live website, dashboard, HUB, security lock and support workflow.	V28.3 LOCKED MASTER Preserved backup retained before the V28.4 change set.

ARCHIVE POLICY

This document records only versions supported by files, build markers, preserved packages or project changelogs. Missing intermediate builds are not reconstructed from memory. Historical files remain listed as development evidence; R38 is the current official release.

Published August 2026

Release Timeline

VERSION	STATUS	CONFIRMED SCOPE
V27	Feature baseline	RSI Pullback V4 integration, approved Hero typography, official slogan and compact floating preview.
V27.2	Audio restoration	Restored local sound and English narration interaction without changing the approved visual layout.
V27.3	Auto-Fit baseline	Universal Auto-Fit became the locked stabilization baseline referenced by V27.4.
V27.4	Final stable	Stabilized floating player controls, local narration/BGM, mobile handling and removed browser TTS dependencies.
V28.3	Locked master	Preserved backup created before the V28.4 production change set.
V28.4	Final stable	WEAI branding, Hero chart positioning, current RSI master, chart slope/candle/EMA updates and dashboard recovery.
V28.5 R36	Native data milestone	WEAI native canvas, Twelve Data integration, synchronized EMA and chart tool expansion.
V28.5 R37 / R37.2	Search stabilization	Custom symbol searches retained WEAI BARS and synchronized the native chart without clearing the canvas.
V28.5 R38	Current official release	Security Lock, owner console, email-queued live support, collision-free fixed UI and enlarged HUB controls.

V27 - V27.4

Foundation and media stabilization

- Integrated RSI Pullback V4 and routed the opening film to the current V27 story asset.
- Applied the approved heavy geometric white/blue title treatment and official AI SMART ENGINE TRADING SYSTEM slogan.
- Added compact floating RSI preview with desktop expansion/drag and mobile tap behavior.
- Restored local narration and hybrid score interaction in V27.2.
- Locked Universal Auto-Fit, Expand/Collapse, full-window, drag, close and narration control behavior in V27.4.
- Removed speechSynthesis/browser TTS dependency paths and retained downloaded American male narration assets.

V28.3

Preserved locked master

- Archive: WEAI-Smart-Website-V28.3-LOCKED-MASTER-BACKUP.zip.
- Created before V28.4 edits and retained as the rollback-safe master baseline.
- Approved pages, layouts, audio, Auto-Fit behavior and dashboard modules were preserved.

V28.4

Brand, Hero, RSI master and dashboard recovery

- Changed primary WE AI labels to WEAI and unified the approved condensed title treatment.
- Shifted only the desktop Hero chart left while retaining tablet/mobile positioning.
- Created one current RSI Pullback master with cache-busting and legacy reference routing.
- Locked EMA 50/100/200 to approximately 1px and strengthened angular green/red candles and chart slopes.
- Preserved moving signal target/ring/pulse and the probability count-up ending at 84%.
- Restored Dashboard Symbol Search, chart resizing, video controls and Universal Auto-Fit.

STABILIZATION STORY

From visual prototype to operating system

PHASE	INSTABILITY REMOVED	STABLE OUTCOME
V27 - V27.4	Fragmented media controls, browser TTS paths and inconsistent responsive behavior	One local narration/BGM path, Auto-Fit baseline and reliable player controls
V28.3 - V28.4	Risk of regression, duplicate RSI assets and disconnected dashboard controls	Locked master backup, one RSI master and restored search/resize behavior
R36	Static/demo-only chart behavior and overlays detached from market coordinates	Native data canvas with synchronized EMA, Session, AMD and HIGH/LOW overlays
R37 - R37.2	Symbol changes could clear the WEAI canvas or break the selected chart mode	Search retained WEAI BARS and synchronized the requested symbol
R38	Unprotected owner setup, isolated support messages, overlapping fixed UI and undersized HUB controls	Permanent Security Lock, owner workflow, email-queued support and collision-free responsive UI

V28.5 R36 - R37.2

Native chart and live-data stabilization

- Introduced the native WEAI Twelve Data canvas feed with SPY/QQQ proxy mapping for free-plan SPX/NQ access.
- Kept Session, HIGH/LOW, AMD, EMA Pulse and price-axis labels in data coordinates during pan and zoom.
- Added grouped chart themes, WEAI BARS default, selectable palettes, entry glow, 13 drawing tools and VWAP.
- R36 verified a synchronized 120-bar native canvas and EMA 200 live feed.
- R37 routed custom symbol searches through the native loader so WEAI BARS remained visible.
- R37 live search changed SPY to AAPL while retaining the synchronized native canvas.

V28.5 FINAL STABLE R38

Current official release

- Unified current release metadata across the main page, Dashboard and HUB.
- Verified owner enrollment and permanently revoked the one-time setup authorization.
- Added the Owner Console and secure visitor chat storage with email notification queuing to support@weaismart.com.
- Separated the desktop RSI/Narration player and WEAI Live Support launcher; the player moves aside when chat opens.
- Added narrow-screen collision handling so the video yields to the open support panel.
- Enlarged HUB navigation, secondary labels, action titles and responsive controls.
- Official distributable: WEAI-Smart-Website-V28.5-FINAL-STABLE-R38.zip.

RELEASE INTEGRITY

The V28.3 locked master remains separate from the active R38 package. Server-only API keys, owner credentials and setup tokens are excluded from distributable archives. The Hostinger package places index.html directly at archive root.

Document source: project changelogs, build markers and preserved package inventory available on August 9, 2026.

MORE THAN EVER.
MORE THAN BETTER.

V28.5 FINAL STABLE R38
The release where the WEAI system became secure, synchronized and operationally stable.
